

Sentia Coding Test

The Sentia coding test requires you to create a Ruby on Rails application with a few features listed below. A CSV will be provided.

The task is;

Part 1

1. Create a Ruby on Rails application.
2. With the provided CSV file, you will need to create a form that can upload the file and import the data into a database. (Prefer Postgresql)
3. Once the data has been imported, you will need to display the imported data in a HTML table.

Part 2

1. Once Part 1 is completed, you will need to add the ability to order the Name, Date and Number columns by ascending/descending when clicking on the column headers. This should be achieved without reloading the page.
2. Add a search field so that you can also filter the table results by Name. This should also be done without reloading the page.

Once the test has been completed. Please zip and email it to *sam.elderfield@sterning.com*
